

## Care and Cleaning of Elkay Copper Sinks

After each use, the sink should be rinsed and towel dried thoroughly. To clean the sink, an ordinary mild detergent and soft cloth should be used, then rinse the sink thoroughly and towel dry. Harsh alkaline-based, ammonia-based, or harsh acidic-based cleaning chemicals or products are not to be used. Never use abrasive cleaners or scouring pads. To remove stains and tarnish, a good quality copper cleaner, following manufacturer's instructions should be used. For added protection, coat with a fine sink wax.
