4-Function Hand Shower

The **MONOGLIDE™** hand shower offers the convenience of a multifunction hand shower with the slide of a button. Now, there is no more twisting and slipping with wet, soapy hands when you change spray patterns on your hand shower. Each slide of the selector button changes to the next spray setting allowing you to keep your hands out of the water stream and free for shampooing, massaging, and other tasks in the shower. The selector button is made of an easy grip material to ensure quick easy spray changes every time and to customize the perfect shower experience for each individual user.

how it works

Each slide of the non-slip button changes to the next spray setting
