

AWC151DZ - 23 Bottle Dual Zone Built-In Wine Cooler

The Avallon AWC151DZ built-in wine cooler combines luxury and style to create a superior storage environment for your treasured wine collection. Its two precise, independently controlled cooling zones enable you to keep both red and white wines at their optimal storage temperatures: 8 standard Bordeaux size bottles in the top zone and 15 bottles in the bottom zone. The AWC151DZ utilizes air cooling technology allowing for even air dispersion, differentiating it from other units in the market.

State-of-the-art Argon filled dual paned Low-E glass filters harmful UV rays away from your collection; acts as a thermal barrier, reflecting unwanted heat making the unit more energy efficient; and the clear glass displays your bottles beautifully. A seamless stainless steel door gives this wine cooler the finished look that makes it perfect to build in under your counter or use free standing. The matching stainless steel front vent and solid handlebar offer perfect modern and sleek finishing touches.

The upscale internal finishes of this unit give you the full luxurious experience. Touch panel digital controls and full pull-out rolling stainless steel trimmed wood shelves provide a high-end look while also providing easy-to-use functionality. The included carbon filter blocks unwanted odors, and the option to select between either blue or white LED side and top mounted internal lights adds to the overall deluxe look and feel of the wine cooler. An upgraded compressor and anti-vibration gasket leave your wine undisturbed and make for proper aging of your wine collection. Finally, you can rest assured that your wine collection will be safe with the included security lock.
